

Build A Bug Hotel

Observe what kind of insects live in your pā hale/māla. Find out what insects eat. Where do they live? How do they depend on the plants and other animals around them? What would happen to these insects if their shelter no longer existed? Then build a bug hotel for those insects in your pā hale or māla. Use recyclable items and materials around your home. See the links below for ideas. Observe what kinds of insects come to visit and keep a journal with data and drawings of them.
